

COMPANY PROFILE

Passion for innovation

INNOVATION AND FLEXIBILITY

A growing reality

Sacemi Gamar is a manufacturing company with a long industrial history that has promptly responded to market challenges with experience and passion.

Today Sacemi Gamar is a leading company in Italy and worldwide in the design and production of electric pumps and motors, an important player and partner in the fourth industrial revolution.

Innovation and production flexibility have been the main characteristics of a growth path that has been made possible by optimizing the relationship between investments in machinery, managerial skills and the enhancement of human resources.

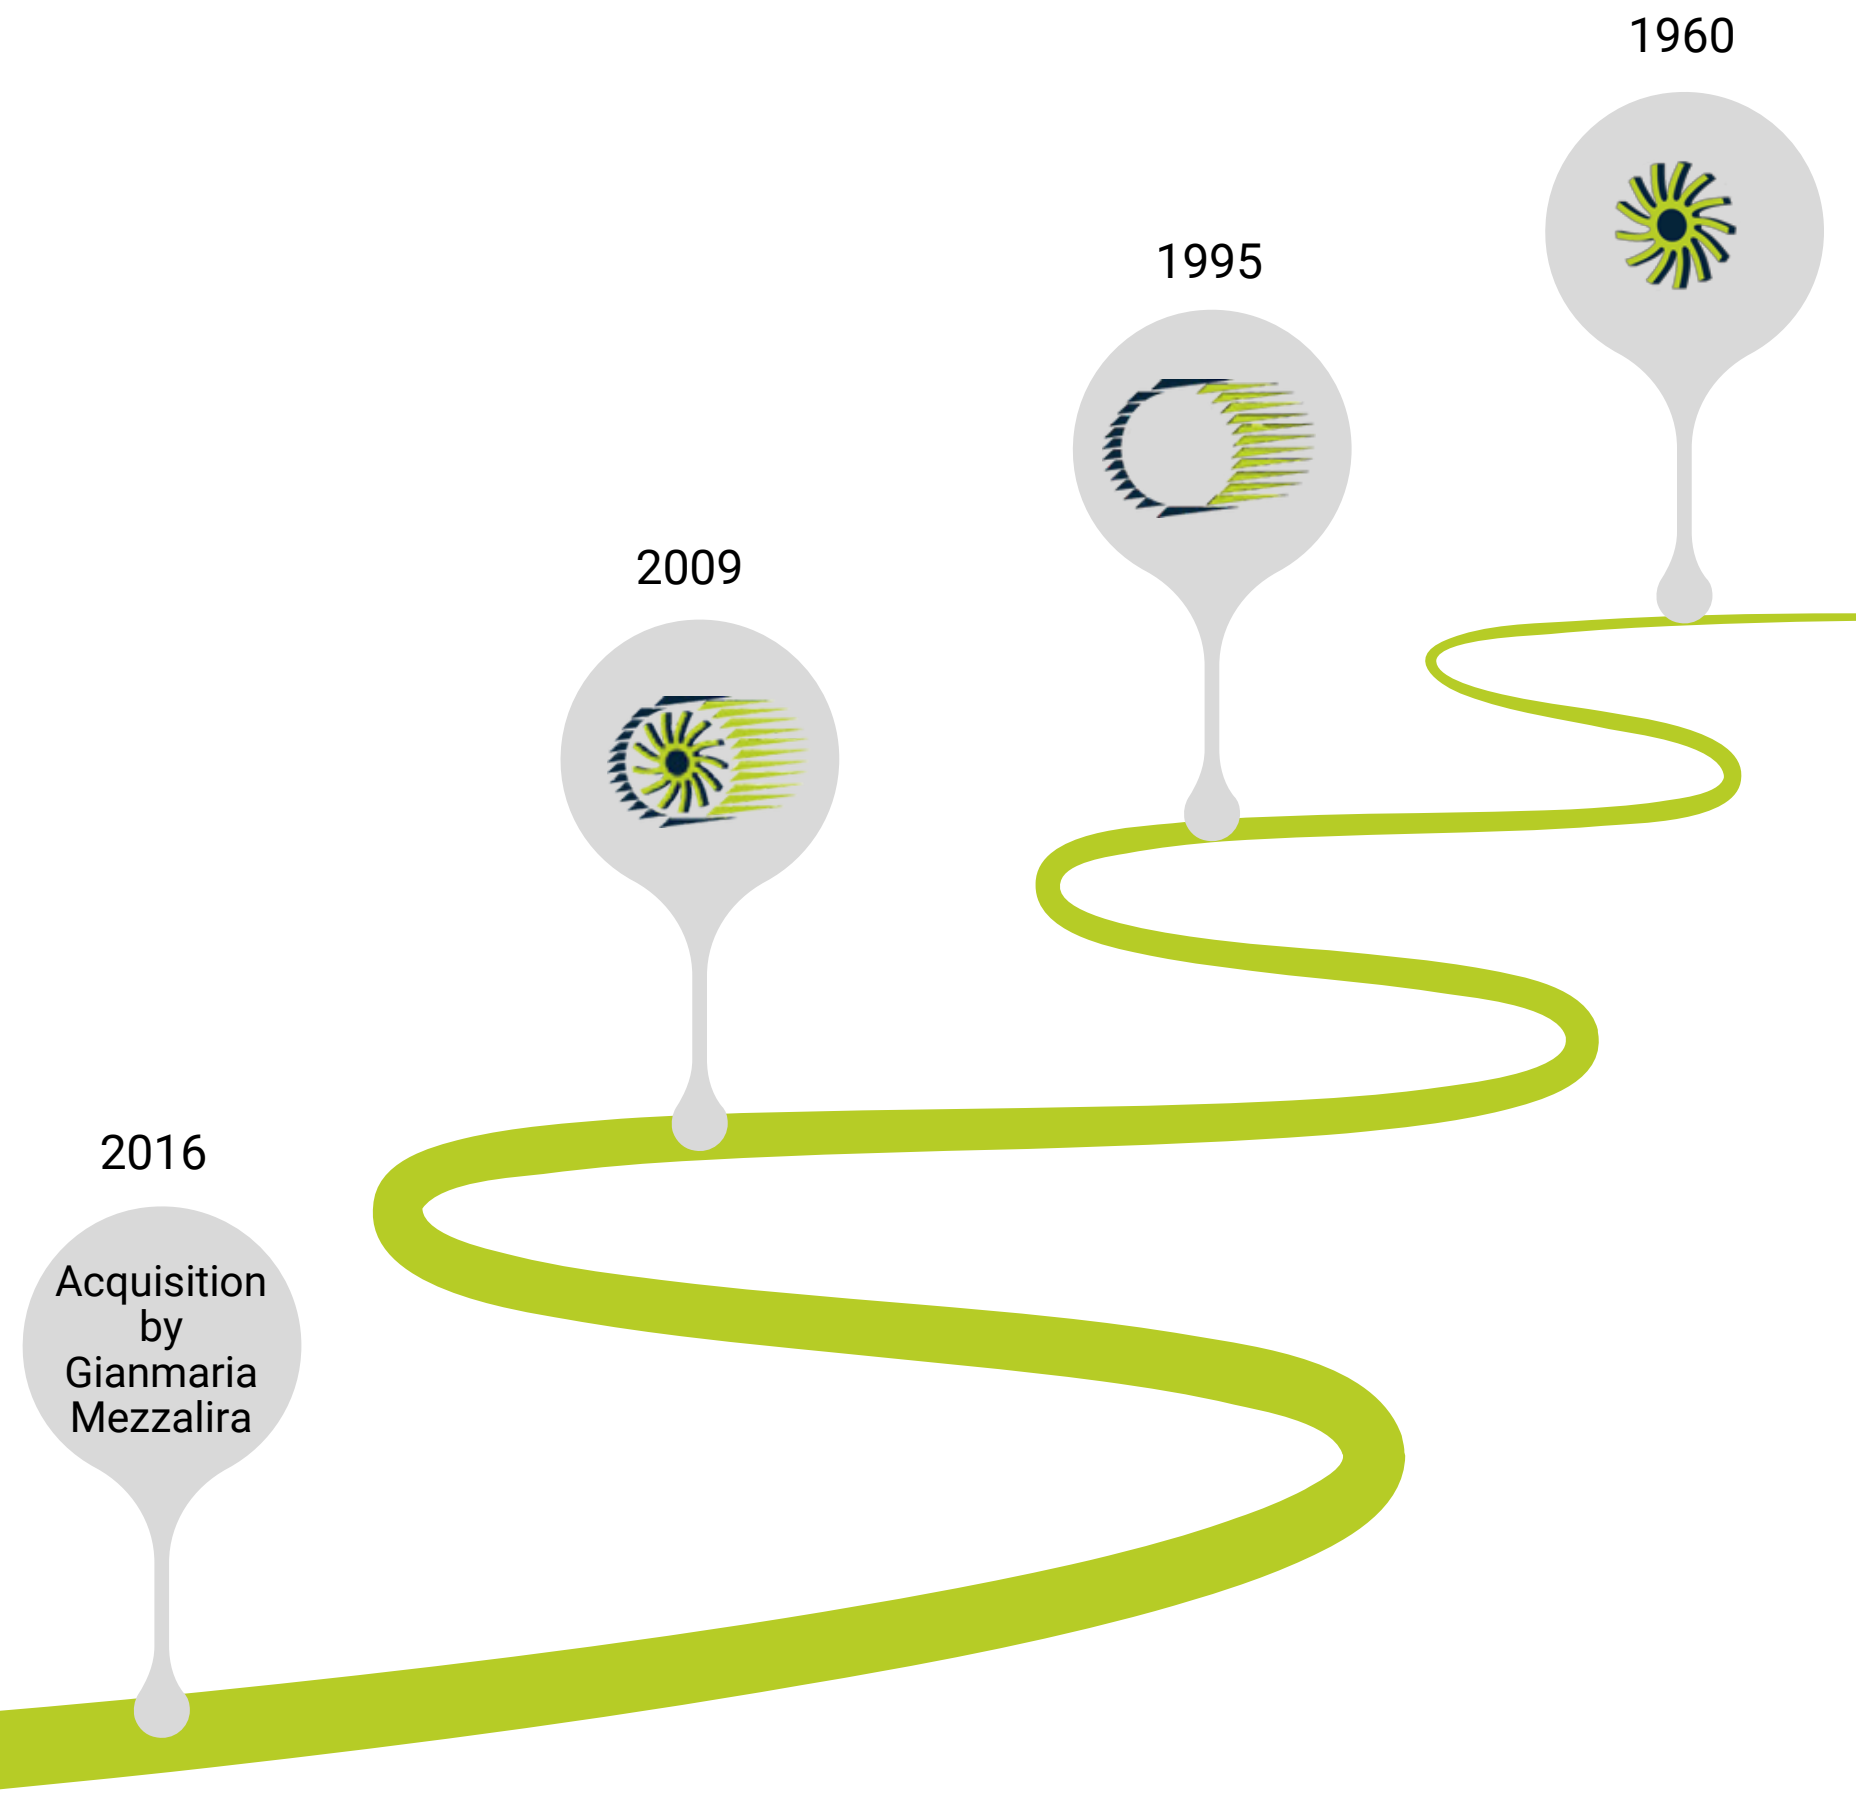

SYNERGIES SERVING THE CUSTOMER

A future-oriented history

Sacemi Gamar is the union of two important historical realities of the **Made in Italy** industry. Sacemi was founded in Milan in the 1960s and in 1984 was acquired by a group of entrepreneurs from the Veneto region and moved to the province of Venice. In 1995 one of these entrepreneurs acquired 100% of Sacemi and moved the company to its current location.

In 2009 Sacemi acquired Gamar, a manufacturer of electric motors and merged it into Sacemi Gamar, which in 2016 was taken over by **Gianmaria Mezzalira**, born in 1979. Thanks to his entrepreneurial experience in a variety of sectors, he is leading the company towards new goals.

INVESTMENT PLAN

A concrete commitment

With an investment of **EUR 3 million**, Sacemi Gamar has initiated an ambitious technological renewal project.

New latest-generation **machine tools**, intensified **research** and **development**, **advanced software** and **quality certifications** are just some of the elements that will enable us to offer our customers increasingly high-performance products and significantly reduce our environmental impact.

This is just the first step of a path that will see Sacemi Gamar committed to **further investments** to consolidate its presence among the industry leaders.

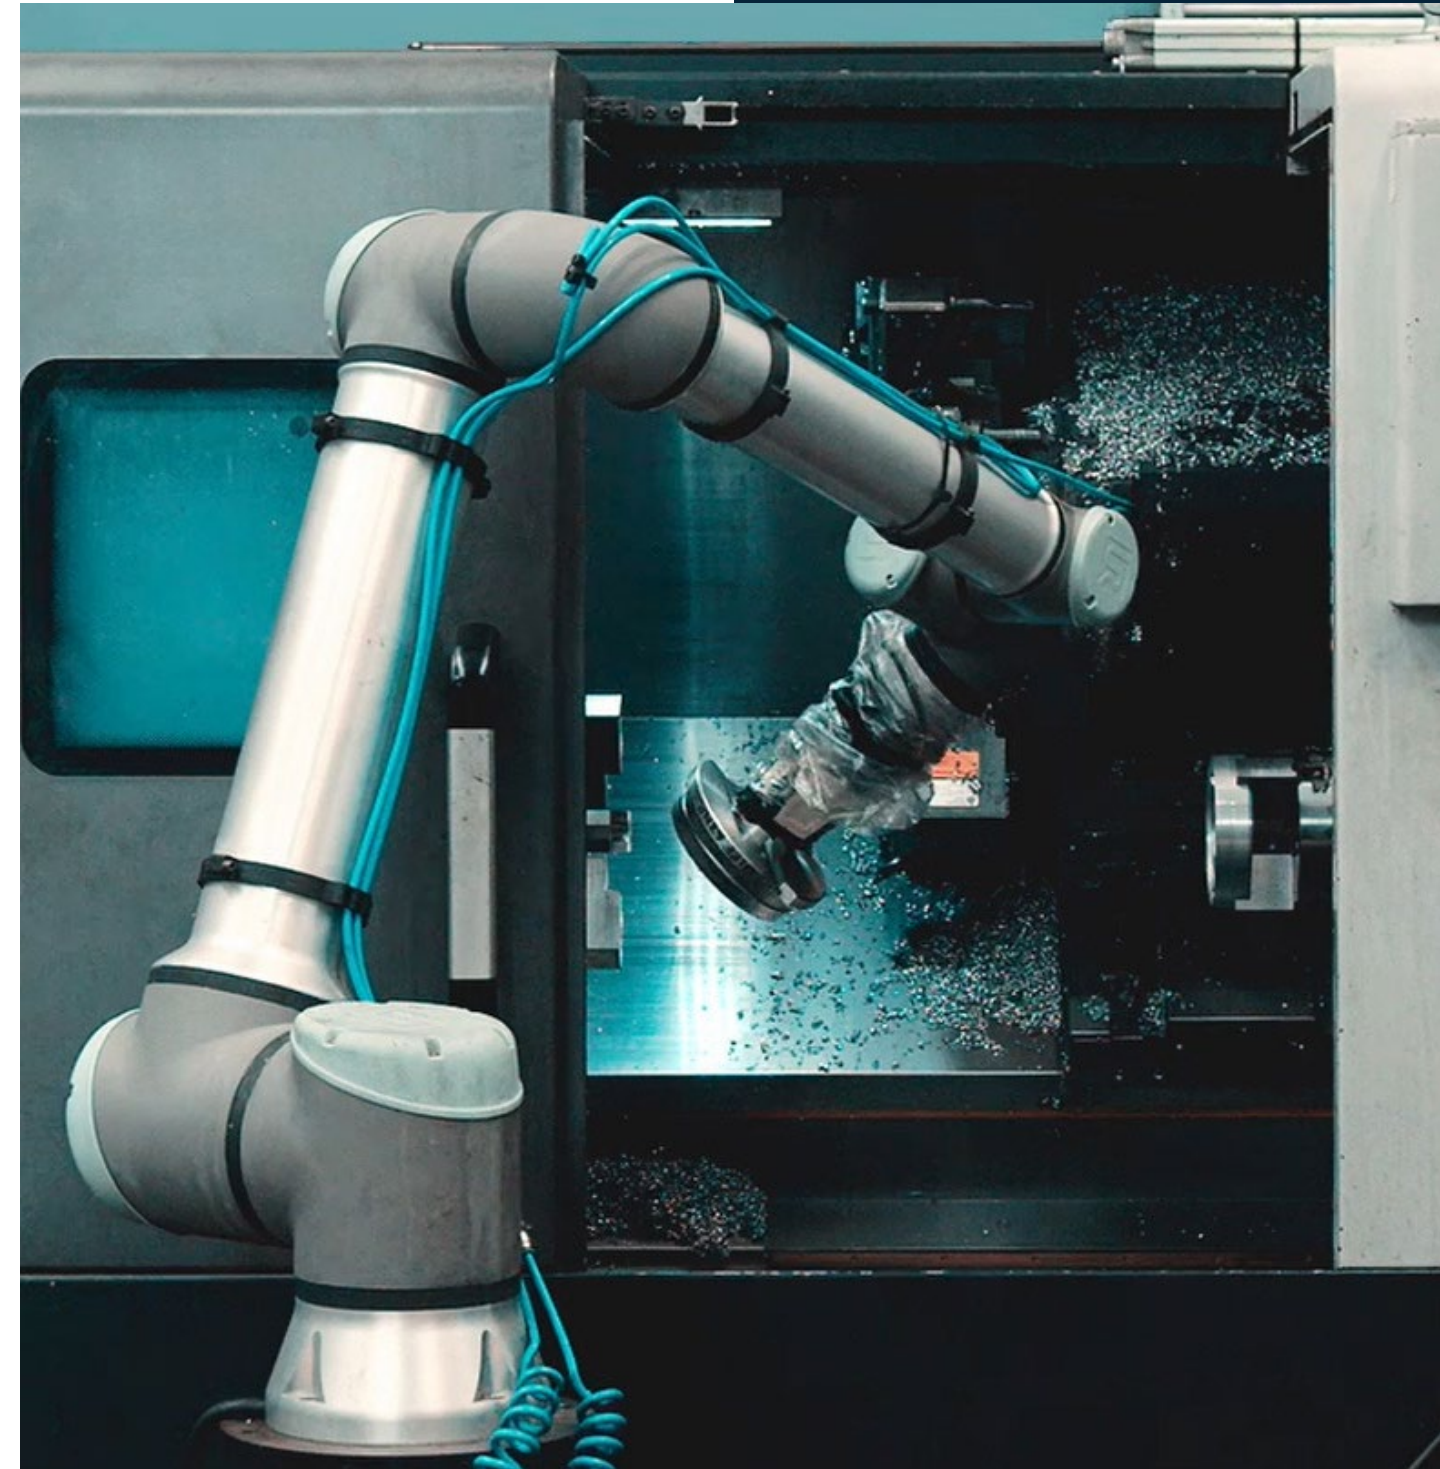

BEYOND GLOBAL CHALLENGES

Designing tomorrow today

With its multi-year business development plan, Sacemi Gamar will accompany its customers through the **Industry 5.0 evolution** and the future global challenges they will face.

The new products developed by Sacemi Gamar will exceed the performance, reliability and energy efficiency required by our current and future customers.

WE EXPORT WORLDWIDE

Made in Italy heart, international soul

With our partners, we share a vision and values, thanks to which we have developed a sales network in the main countries in **Europe** and **North America** with an important presence also in **South America** and **Asia**.

PRESENCE AT MAJOR TRADE FAIR EVENTS IN EUROPE

Globally connected

Sacemi Gamar constantly participates in major **international trade fairs**, an opportunity to present the latest solutions, meet new partners and pick up on new industry trends.

Sacemi Gamar is present at:

MCE Milan | Italy

BIMU Milan | Italy

EMO Hannover | Germany

AMB Stuttgart | Germany

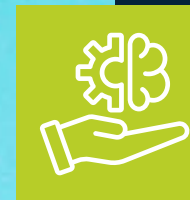

CONSTANT COMMITMENT

Passion and experience

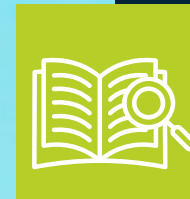

We work every day to design solutions that meet market needs and anticipate trends with standardised products but also **customised designs**.

We work closely with leading manufacturers to understand the needs of new machine tools and design pumps and motors according to shared needs and criteria.

KNOW HOW

Professionalism and experience in the most diverse fields of application

RESEARCH

We constantly invest in research and development of innovative solutions

QUALITY

We select and process quality raw materials

PRODUCTS

Pumps for industry

The production program includes a wide range of low and medium pressure coolant pumps, in a large number of variants, with pump bodies made of stainless steel, cast iron, aluminium, brass, plastic material, designed for industrial applications and mainly for use in **cooling, lubrication, washing, air conditioning systems** and wherever efficient circulation of water-oil emulsions and pure cutting oils is required, with flow rates of up to 1,400 litres/min. and head of up to 230 metres.

In particular, our coolant pumps are designed to guarantee maximum reliability and life span, low operating costs, safety of use and total elimination of the risk of spillage or external leakage of the pumped liquids.

Main applications

- OIL AND OIL EMULSION CONDITIONING
- FILTRATION
- DRILLING AND MILLING
- GLASS PROCESSING
- WATER CURTAIN COATING BOOTHS
- PRINTING MACHINES
- COOLING
- RECYCLING
- RECYCLING
- CUTTING
- THERMOREGULATION
- TURNING
- SURFACE TREATMENT
- POURING
- HUMIDIFICATION ON AIR CONDITIONING AND CLIMATE CONTROL SYSTEMS

PRODUCTS

Motors for industry

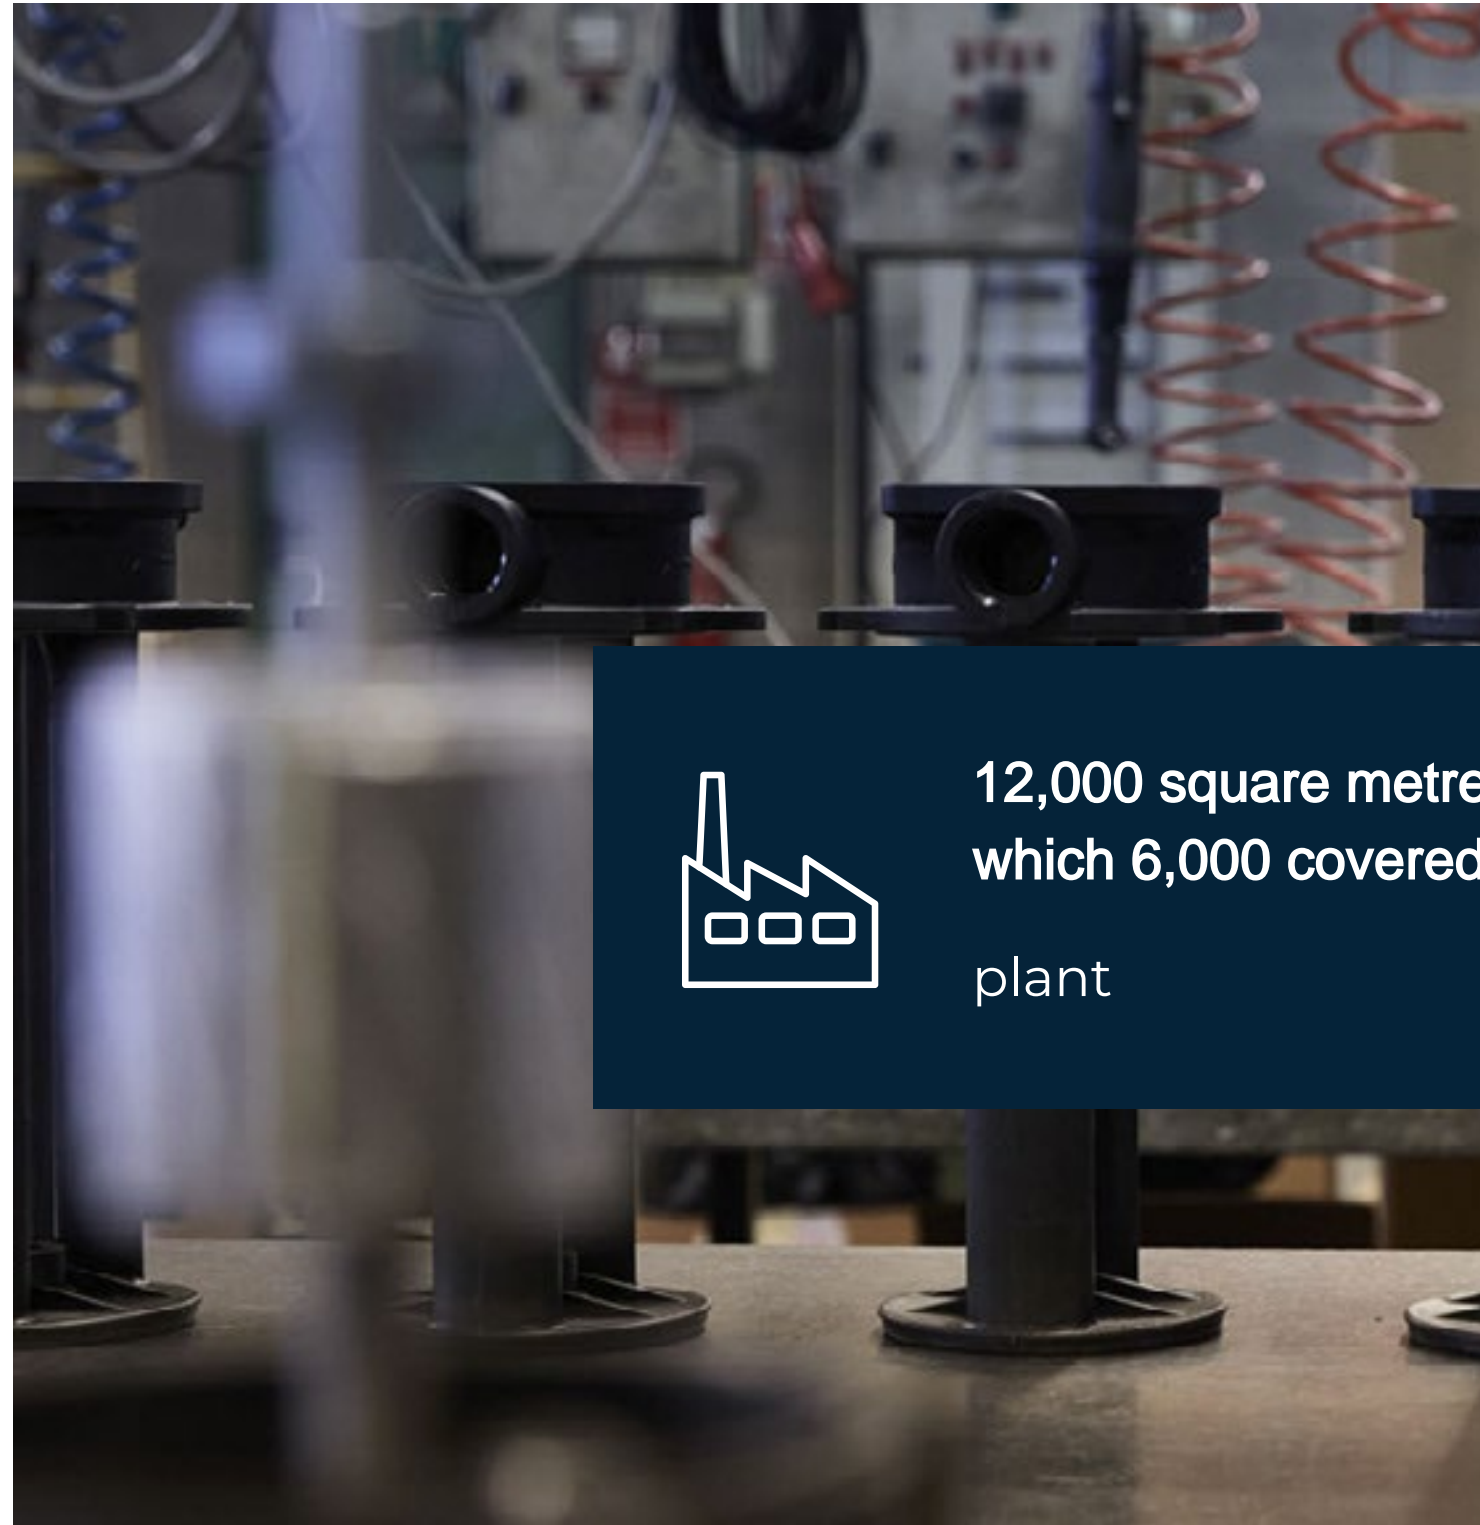

The Sacemi Gamar catalogue offers a wide range of three-phase and single-phase asynchronous electric motors, also self-braking with d.c. and a.c. brakes, with construction characteristics in compliance with IEC 60034, LVD 2006/95/EC, EMC 2004/108/EC, MD 2006/42/EC, RoHS 2011/65/EC.

Special execution motors, mainly built with customised flanges, shafts, housing shapes or electrical parts, are aimed at targeted and specific sectors applications.

The main objective is the **customisation of motors** according to customer requirements, with a wide range suitable for solving the problems of asynchronous motor drives. Simultaneously to the mechanical design, the electrical design is activated to allow a harmonious execution of the required product.

The test laboratory, in addition to the normal control of the finished product, checks all samples and declares their conformity to the initial design.

FLEXIBILITY AND OPTIMIZATION

Project -oriented production

Sacemi Gamar relies on technology to improve **speed** and **operational flexibility** and on **design oriented** to meet market needs in real time.

The technology, design and construction of machine tools and everything that revolves around them, such as robotics and other automation systems, are strongly linked to components, which the electric pump and electric motor are part of.

OPERATIONAL TESTING AND RIGOROUS CONTROLS

Testing and commissioning: performance assurance

Sacemi Gamar operates a **fully renewed in-house laboratory**, equipped with state-of-the-art instrumentation for the **functional testing and commissioning of motors and electric pumps**, ensuring performance, reliability, and full compliance with design specifications.

A rigorous quality control process, enhanced by latest-generation technologies, that reduces start-up risks and ensures long-term operational continuity.

CUSTOMISATION AND PROCESSES

Process flow

PROJECT DESIGN

Product conception and development through design, prototyping and definition of technical specifications

MANUFACTURING AND ASSEMBLY

Processing of raw materials and assembly of the various components and finishing them according to customer requirements

TEST

Verification of product quality and conformity to pre-defined specifications through a series of tests and analyses

LOGISTICS

Material and product flow management, from production to final distribution to the customer

PEOPLE AND THE ENVIRONMENT IN THE SPOTLIGHT

All-round commitment

Sacemi Gamar strongly believes in **social and environmental sustainability**.

Precisely for this reason, in recent years the company's ownership, together with its team, have put in place a program of concrete actions to improve the company's impact on the territory and people.

CONTINUOUS IMPROVEMENT

Certified quality

Design and construction know-how, but above all the desire to stay up-to-date about continuous product developments, allow Sacemi Gamar to offer 100% made in Italy quality solutions with the reliability of industrial processes and the attention to detail in the customization.

Internal processes are constantly monitored because Sacemi Gamar is a company that makes **quality** a priority.

CERTIFICATIONS AND CODE OF ETHICS

Certified commitment

Sacemi Gamar has not only implemented a series of actions but has decided to certify them and adopt certified processes and documents in order to create a positive working environment with values shared by all the people involved.

Sacemi Gamar has adopted an **Ethical Code** and the **Organizational Model 231/01**, has obtained **ISO 14001 certification**, and is about to achieve **ESG certification**.

CONCRETE ACTIONS FOR LAND AND THE EARTH

Environmental protection

Sacemi Gamar is committed to environmental protection and sustainability, which is why the company has achieved **ISO 14001 certification**. In this regard, Sacemi Gamar has increased the use of renewable energy and adopted a recycling-oriented policy that includes careful waste management.

The purchase of raw materials from cleaner sources has also become a preferred channel over time, underlining the importance Sacemi Gamar gives to environmental issues.

Sacemi Gamar also submits its products and processes to constant environmental compatibility assessments, optimizing them where necessary.

The company responsibly fulfils its role as a member of the community and partner in policy in an ongoing dialogue on future mobility concepts and **ecologically sustainable development**.

CONCRETE ACTIONS AND PROJECTS

Environmental sustainability

CIRCULARITY OF PRODUCTS

We design durable, circular products with the aim of ensuring a long life cycle and recyclability at the end of their life.

SUSTAINABLE PACKAGING

Even the packaging of our products is designed to be sustainable by reducing it as much as possible and using recycled and recyclable materials.

GREEN ENERGY

We have installed a photovoltaic system that covers 90% of our current needs with the aim of reaching 100% by 2026, and all lighting sources in the production departments and offices have been converted to LED type. Everything is managed by an advanced home automation system capable of monitoring consumption and thus limiting environmental impact.

SUPPLY CHAIN

Made in Italy

Sustainability pass through also the supply chain. What is not produced directly by Sacemi Gamar is sourced from a network of local suppliers to ensure a 100% Made in Italy products: **200 km** is the maximum distance from the company to suppliers.

This guarantees not only quality products but also a **significant reduction of the ecological footprint.**
